

## Certificate of Technical Capacity by NORISKO ENVIRONNEMENT

### Article TRANSOFT 10/02/2004

The activities of NORISKO ENVIRONNEMENT are dedicated exclusively to environmental consultancy studies. We offer our services to all industries who are unable to combat their environmental pollution problems themselves; technical studies aimed towards reducing pollution impact on the atmosphere, ground water pollution analysis, impact studies, risk / danger analysis, pollution clearance. .... With the help of the vast commercial network of the NORISKO group (70 agencies established all around in France), we have undertaken the challenge to offer unrivalled and flexible services in collaboration with small teams established in each region.

Three main reasons have convinced us of the major role played by numerical modeling in solving environmental pollution problems. Firstly: the French pollution laws are now more often accepting the computed results to decide preventive measures. Secondly: our customers have understood the financial benefits of using numerical modeling to optimize the preventive measures rather than using the expensive & risky methods of installing security measures with an approximate safety margin without a real knowledge of the extent of risks involved. Finally, we are also convinced that a numerical simulation is a good exercise if it is analyzed by an experienced environmental consultant capable of judging the results which will aid in the acquisition of requisite tools rather than just subcontracting the studies. NORISKO ENVIRONNEMENT has thus looked towards developing a high degree of technical competence in order to answer the administration needs & at the same time defend the interests of our clients to the best of our capacity.

In order to face the multiple complexities of the situations encountered, we decided to invest in a range of technically complete numerical tools: PANEPR for dispersion of toxic gases, PANFIRE for simulation of fires & finally ASSESSRISK for risk evaluation on complex petrochemical sites. Our choice of supplier was automatically TRANSOFT who is the only developer capable of providing us excellent quality tools covering all these aspects. Moreover, we permit ourselves to specially emphasize the efforts put in by TRANSOFT in training our consultants to master all the features of their products purchased by us & congratulate it's excellent ambassadorial quality.

With the aid of these new tools & a team specialized in new risk analysis methods (probabilistic methods, danger quantification by simulation...), NORISKO ENVIRONNEMENT is now fully equipped to face confidently the challenges presented by the Environmental Consultancies Studies Sector.
